

Held-out validation and boundary cases

Fixed choices transfer to public held-out contexts, while preserving model-specific margin boundary cases

A

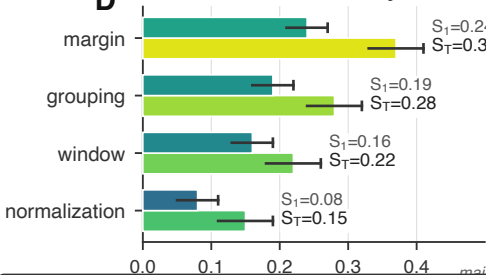

~	~	~	equivocal
~	Y	~	equivocal
N	N	N	ruled out

Global sensitivity - Margin sensitivity

validation boundary n=4 panels

support layer: 1 main inference: 1 constraint layer: 1 limitation only: 1

row 1	plan	methods	0	1	support layer
row 2	pass	main	0	4	in inference
row 3	boundary	main	0	3	constraint layer
row 4	access	methods	0	1	limitation only

inside holm rope verdict
Y = supports · N = rules out · ~ = equivocal

Top 3 drivers (margin, grouping, window) account for 85% of total variance.
