

FIG-006. Reproducibility and user adoption

Stage 10.14 readable review render from the Stage 10.5 panel-evidence crosswalk

A Python, CLI, API, and workbench parity

Purpose

Show that interface surfaces delegate to the same stable method outputs.

Reader readout

Software maturity supports inspectability after the method evidence has already been established.

Stage 7.6/7.7 software after method evidence

B Analysis export bundle anatomy

Purpose

Show inputs, schema, parameters, outputs, figures, and checksums in the same bundle.

Reader readout

The method reports are reproducible rather than hidden in session state.

Stage 7.6/7.7 software after method evidence

C Clean-room reproduction

Purpose

Document the source-distribution replay route for selected evidence outputs.

Reader readout

A fresh environment can regenerate the retained method evidence surfaces.

Stage 7.6/7.7 software after method evidence

D Archive and checksum coverage

Purpose

Show release archive inventory and checksum coverage.

Reader readout

The public release is citable and inspectable without importing private manuscript data.

Stage 7.6/7.7 software after method evidence

E User-path rehearsal

Purpose

Show biologist-facing and quantitative paths to the same reviewable outputs.

Reader readout

Adoption evidence is presented as reproducibility support, not as the scientific advance itself.

Stage 7.6/7.7 software after method evidence
