

RhoDyn formalizes residence-state inference as a decision object

A

B

Executable positive, negative, and ambiguous fixtures · 3 alternatives · 1 ruled out, 1 consistent

C

declared method call	Y	Y	~	consistent
overgeneralized mechanism	N	~	Y	ruled out
insufficient input context	~	Y	Y	equivocal

supports
Y = supports · N = ruled out · ~ = equivocal
bounds
withholds
verdict

D

declared method call	Y	Y	~	consistent
overgeneralized mechanism	N	~	Y	ruled out
insufficient input context	~	Y	Y	equivocal

supports
Y = supports · N = ruled out · ~ = equivocal
bounds
withholds
verdict
