

# RhoDyn formalizes residence-state inference as a decision object

A

B

Executable positive, negative, and ambiguous fixtures · 3 alternatives · 1 ruled out, 1 consistent

C

|                            |   |   |   |            |
|----------------------------|---|---|---|------------|
| declared method call       | Y | Y | ~ | consistent |
| overgeneralized mechanism  | N | ~ | Y | ruled out  |
| insufficient input context | ~ | Y | Y | equivocal  |

supports Y = supports · N = ruled out · ~ = equivocal

D

|                            |   |   |   |            |
|----------------------------|---|---|---|------------|
| declared method call       | Y | Y | ~ | consistent |
| overgeneralized mechanism  | N | ~ | Y | ruled out  |
| insufficient input context | ~ | Y | Y | equivocal  |

supports Y = supports · N = ruled out · ~ = equivocal
